Tour – Seminar *Modern Landscaping Ideas of the Historical Park* (Guide - Antanas Sebeckas)

The park, which is known as the Palanga Botanical Park, was created in the surroundings of the sacred Birutė forest by Count Feliksas Tiškevičius in (1895 – 1898). The symbolic date of the establishment of the Park is considered the 1897. The instigator of the project was the famous French landscape architect Edouard Francois André (1840 – 1911, who spent several summers in Palanga with his son Rene Eduard Andre (1867 - 1942) supervising the construction of the park. The Belgian gardener Jules Buysens assisted them.

In 2013, the complex reconstruction of this park was started. By means of modern tools and technologies, the former greatness of the park was restored. The infrastructure was updated, the main pond was cleaned, the structure of plantings was transformed, the fountain was repaired, the new marble vases and fences were constructed, the new lamps were installed, the landscape entrance from the central Vytautas Street and from other ones was tidied. The historical name of Birute was returned to one of the most beautiful and most unique parks in Lithuania. Antanas Sebeckas, the former director of park, will accompany participants of the conference all over the renewed park and will help you discover unique accents of it.
